

PROFESSIONAL

The challenge

As professional organisations grow and expand their client base, they face the challenge of ensuring that the business continues to operate effectively. Often this means operating across multiple sites and locations and ensuring people can operate effectively.

The fast upload speeds and low latency associated with fibre broadband are enabling professional organisations to move their practice management and file storage systems online, while providing staff with the ability to access all the office information from wherever they are working.

Save time and money

Moving to the cloud enables organisations to retire the power hungry servers in their computer rooms, saving time and money on support, maintenance and new hardware.

Work flexibly

Flexible working brings huge benefits to professional organisations. Tasks that require a lot of concentration can be difficult to complete effectively within an office environment, with its inevitable distractions. Remote access to business systems enables employees to work from the location that best suits their task.

Environmentally friendly

Home working and the use of telephone and video conferencing to replace travelling to meetings benefits the employee by reducing travel time and costs, improves productivity for the company by avoiding the need to travel, and benefits the environment by enabling the organisation to reduce its carbon footprint.
